Project Details

Major project :

Travel & Tourism Management System –

- It is a comprehensive application designed to manage various operation within a Hotel. The system is built using Java Swing for the user interface, MySQL as the database and JDBC . It features Over 20 highly functional Java classes, providing a robust framework for managing

hotel operations efficiently.

- User part – This module covers the details about the registration of users which they can be register by itself by adding data like name, password, email id and further details. After registration they can be sign in by their username and password. User can sign in and book each the Packages for travelling and staying in hotels . The user can see the confirmation in their view package .
- Room Booking : Allows customer to book AC or Non-AC ROOMS based on availability and preferences.
- Room Search : Enables customers to search for available rooms using various filters.
- Check-in & Check-out: Facilitates seamless check-in and cheak-out processes for guest.
- Admin part – This module is mainly based on admin. System will check the admin user name and password for authentication. After the verification for authorization the admin can be able to precede the process. All works are done under his control.
- Add Room: Admin can add new rooms to the system, specifying room details and availability.
- Add Employee: Admin can add new employees to the system, managing their roles and responsibilities.
- Add Driver: Admin can add drivers to manage guest transportation services.
- Manage Check-In/Check-Out: Admin can oversee the check-in and check-out processes, ensuring accuracy and efficiency.

Web Developing Project :

Facebook Homepage –

- I made a website where users can see their connection with friends, people and family members also can see their news feed , activenees and events timely.

Gmail Homepage –

- The features include email inbox management, composing and sending emails, organizing messages with labels and filters, and integration with Google Workspace apps.

Javascript Project :

Racing Game –

- It made by using HTML and CSS and Javascript programming Language. It features are :
- Game run by both left – right arrow keys , by using this key user can score the point until the car get crashed.
- Your score will showe in the end after the car crashed.
